## DETAILED ACTION

### *Claim Objections*

1. Claims 1, 4, 6, 7, 11, 14, 17, 27, 29 objected to because of the following informalities:

As to claims 1, 7, the variables "W" and "M" are not defined in the claims.

As to claim 4, it is not clear as to what is meant by "wherein B is the is the maximum" in line 1 of the claim.

As to claims 6 and 7, 11, 14, 17, 27 and 29, the variables A, B, (Y-1), J, W, (A-1) are not clearly defined in the claims.

Appropriate correction is required.

### *Claim Rejections - 35 USC § 112*

2. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

3. Claims 11-20 are rejected under 35 U.S.C. 112, second paragraph, as being incomplete for failing to provide steps of the claims and that the claims are not clear as to whether they are claims for making or using. See MPEP § 2172.01.

### *Double Patenting*

4. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. A nonstatutory obviousness-type double patenting rejection is appropriate where the conflicting claims are not identical, but at least one examined application claim is not patentably distinct from the reference claim(s) because the examined application claim is either anticipated by, or would have been obvious over, the reference claim(s). See, e.g., *In re Berg*, 140 F.3d 1428, 46 USPQ2d 1226 (Fed. Cir. 1998); *In re*

Art Unit: 2133

*Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) or 1.321(d) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent either is shown to be commonly owned with this application, or claims an invention made as a result of activities undertaken within the scope of a joint research agreement.

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

Claims 1-30 are rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claims 1-20 of U.S. Patent No. 7,103,832. Although the conflicting claims are not identical, they are not patentably distinct from each other because:

The subject matter claimed in the instant application (10/709,794) is fully disclosed in the cited U.S. Patent No. 7,103,832, for example:

Independent claims 1, 11, 21 and 26 of the present application (No. 10/709,794) and claims 1, 9 and 17 of U.S. Patent No. 7,103,832 are functionally equivalent.

As per claims 1, 9 and 17 (7,103,832) and claims 1, 11, 21 and 26 (10/709,794), U. S. Patent serial No. 7,103,832 claims "A cyclic redundancy check circuit, comprising: a W-bit packet data slice latch having outputs; a multiple level XOR subtree...; a remainder XOR subtree having inputs and outputs; a combinational XOR subtree...; a combinatorial XOR tree...; and an M-bit current CRC result latch...." and application with serial No. 10/709,794 claims "A circuit, comprising: multiple W-bit packet data slice latches each having inputs and outputs...; a data partition comprising multiple data XOR subtree levels...; a remainder partition comprising multiple remainder XOR subtree levels and having remainder latches between said remainder XOR subtree levels...; a combinatorial XOR tree...; and an M-bit current cyclic redundancy

Art Unit: 2133

check (CRC) remainder latch having inputs and outputs...". It is obvious that both applications claim essentially the same limitations: a W-bit packet data slice latch; a remainder XOR subtree; a combinatorial XOR tree; and an M-bit current CRC).
